

## ∨KD **DN 10÷50**

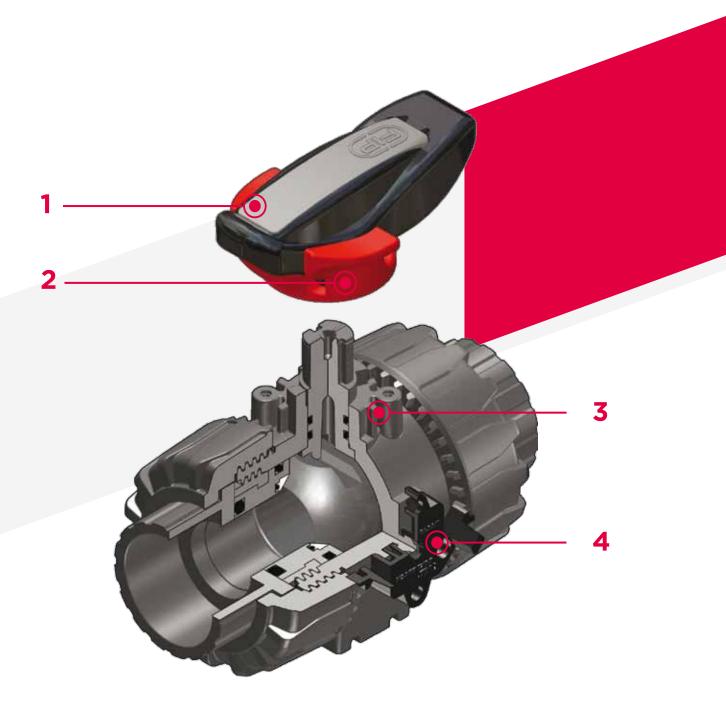

FIP has developed a VKD DUAL BLOCK® 2-way ball valve to introduce a high reference standard in thermoplastic valve design. VKD is a True Union ball valve that meets the most stringent needs required by industrial applications.

#### **DUAL BLOCK® 2-WAY BALL VALVE**

- Connection system for solvent weld, threaded and flanged joints
- Patented SEAT STOP\* ball seat carrier system that lets you micro-adjust ball seats and minimise the axial force effect.
- Easy radial disassembly allowing quick replacement of O-rings and ball seats without any need for tools
- PN16 True Union valve body made for rigid PVC-C injection moulding equipped with built-in bores for actuation. ISO 9393 compliant test requisites
- Option of disassembling downstream pipes with the valve in the closed position
- Floating full bore ball with high surface finish
- Carrier integrated in the body for valve anchoring
- Ball seat carriers can be adjusted using the Easytorque adjustment kit
- Valve material compatibility (PVC-C) and elastomer seal elements (EPDM or FPM), with water, drinking water and other food substances as per current regulations

| <b>Technical specifications</b> |   |
|---------------------------------|---|
| Construction                    | 2-way True union ball valve with locked carrier and lockable union nuts   |
| Size range                      | DN 10 ÷ 50  |
| Nominal pressure                | PN 16 with water at 20° C   |
| Temperature range               | 0 °C ÷ 100 °C   |
| Coupling standards              | <b>Solvent welding:</b> EN ISO 15493, ASTM F 439. Can be coupled to pipes according to EN ISO 15493, ASTM F 441 |
|                                 | <b>Thread:</b> ISO 228-1, DIN 2999, ASTM F437   |
|                                 | <b>Flanging system:</b> ISO 7005-1, EN ISO 15493, EN 558-1, DIN 2501, ANSI B.16.5 cl. 150, JIS B 2220           |
| Reference standards             | Construction criteria: EN ISO 16135, EN ISO 15493   |
|                                 | Test methods and requirements: ISO 9393   |
|                                 | Installation criteria: DVS 2204, DVS 2221, UNI 11242  |
|                                 | Actuator couplings: ISO 5211  |
| Valve material                  | PVC-C   |
| Seal material                   | EPDM, FPM (standard size O-Ring);<br>PTFE (ball seats)  |
| Control options                 | Manual control; electric actuator; pneumatic actuator   |

- 1 HIPVC Ergonomic multifunctional handle equipped with removable tool to adjust the ball seat carrier.
- 2 Handle block 0°- 90° SHKD (available as an accessory) ergonomically operable during service and lockable
- Robust integrated bracket for valve anchoring, for easy and quick automation even after valve installation on the system via the Power Quick module (optional)
- **4 DUAL BLOCK**® patented lock system that ensures union nut tightening hold even in severe conditions such as vibrations or heat dilation

### TECHNICAL DATA

# PRESSURE VARIATION ACCORDING TO TEMPERATURE

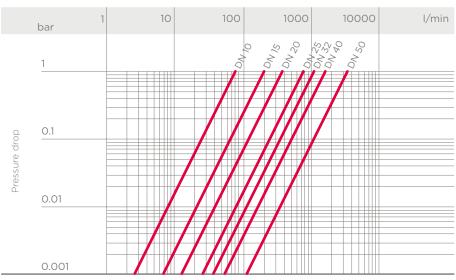

For water and non-hazardous fluids to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

Note: When using PVC-C at working temperatures higher than 90°, it is advisable to first contact the service centre.

Working temperature

## PRESSURE DROP GRAPH

Flow rate

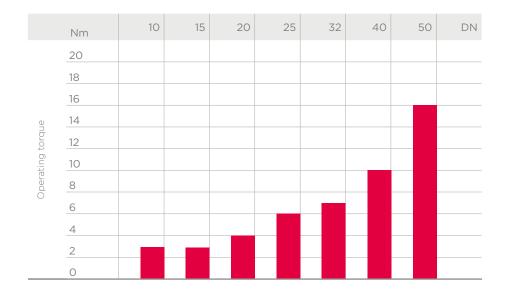

## K<sub>v</sub>100 FLOW COEFFICIENT

The  $K_v$ 100 flow coefficient is the Q flow rate of litres per minute of water at a temperature of 20°C that will generate  $\Delta p$ = 1 bar pressure drop at a certain valve position.

The  $K_v$ 100 values shown in the table are calculated with the valve completely open.

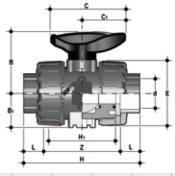

| DN                       | 10 | 15  | 20  | 25  | 32   | 40   | 50   |
|--------------------------|----|-----|-----|-----|------|------|------|
| K <sub>v</sub> 100 l/min | 80 | 200 | 385 | 770 | 1100 | 1750 | 3400 |

### OPERATING TORQUE AT MAXIMUM WORKING PRESSURE

The information in this leaflet is provided in good faith. No liability will be accepted concerning technical data that is not directly covered by recognised international standards. FIP reserves the right to carry out any modification. Products must be installed and maintained by qualified personnel.

#### **MSKD**

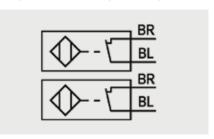

MSKD is a limit switch box with electromechanical or inductive micro switches to remotely signal the valve position. Manual valve installation is possible using the Power Quick actuation module.

The box can be assembled on the VKD valve even if already installed on the system.

\* To be used with an amplifier \*\* Outside areas with explosion risks

### FASTENING AND SUPPORTING

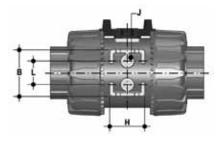

All valves, whether manual or driven, must be adequately supported in many applications.

The VKD valve series is therefore provided with an integrated bracket that permits direct anchoring of the valve body without the need of other components.

For wall installation, dedicated PMKD mounting plates which are available as accessories can be used. These plates should be fastened to the valve before wall installation.

PMKD plates also allow VKD valve alignment with FIP ZIKM pipe clips as well as allowing different sizes of valves to be aligned.

- 18 · Distance plate (PP-GR 1)\*\*
- 19 · Screw (STAINLESS steel 2)\*\*

<sup>\*</sup> Spare parts

<sup>\*\*</sup> Accessories

The material of the component and the quantity supplied are indicated between brackets

#### DISASSEMBLY

- Isolate the valve from the line (release the pressure and empty the pipeline).
- 2) Release the union nuts by pressing the lever on the DUAL BLOCK\* (16) along the axis and separate it from the union nut (fig. 1-2). IT is also possible to completely remove the locking device from the valve body.
- 3) Fully unscrew the union nuts (13) and extract the body sideways.
- 4) Before disassembling, hold the valve in a vertical position and open it 45° to drain any liquid that might remain.
- 5) After closing the valve, remove the special insert (1) from the handle (2) and push the two projecting ends into the corresponding recesses on the ball seat carrier (11). Rotate the stop ring anti-clockwise to extract it (fig. 3-4).
- 6) Pull the handle (2) upwards to remove it from the valve stem (4).
- Press on the ball from the side opposite the "REGULAR ADJUST" label, being sure not to scratch it, until the ball seat carrier exits (11), then extract the ball (6).
- 8) Press the stem (4) inwards until it exits the body.
- Remove the O-Rings (3, 8, 9, 10) and PTFE ball seats (5) extracting them from their grooves, as illustrated in the exploded view.

#### **ASSEMBLY**

- 1) All the O-rings (3, 8, 9, 10) must be inserted in their grooves as shown in the exploded view.
- 2) Insert the stem (4) from inside the body (7).
- 3) Place the PTFE ball seats (5) in the housings in the body (7) and in the ball seat carrier (11).
- 4) Insert the ball (6) rotating it to the closed position.
- 5) Screw the carrier (11) into the body and tighten up in the clockwise direction using the handle (2) to limit stop.
- 6) Insert the valve between the end connectors (12) and tighten the union nuts (13) making sure that the socket seal O-rings (10) do not exit their seats.
- 7) The handle (2) should be placed on the valve stem (4).

**Note:** during assembly, it is advisable to lubricate the rubber seals. Mineral oils are not recommended for this task as they react aggressively with EPDM rubber.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

### INSTALLATION

Before proceeding with installation. please follow these instructions carefully:

- 1) Check that the pipes to be connected to the valve are aligned in order to avoid mechanical stress on the threaded joints.
- 2) Check that the DUAL BLOCK® union nut locking device (16) is fitted to the valve body.
- 3) To release the union nuts, axially press the release lever to separate the lock and then unscrew it in the counter-clockwise direction.
- 4) Unscrew the union nuts (13) and insert them on the pipe segments.
- 5) Solvent weld or screw the end connectors (12) onto the pipe ends.
- 6) Position the valve body between the end connectors and fully tighten the union nuts (13) manually by rotating clockwise without using wrenches or other tools that could damage the union nut surface.

- 7) Lock the union nuts by returning the DUAL BLOCK® to its housing, pressing on it until the hinges lock on the nuts.
- 8) If necessary, support the pipework with FIP pipe clips or by means of the carrier built into the valve itself (see paragraph "fastening and supporting").

The VKD valve can be equipped with a handle block to prevent ball rotation (supplied separately).

When the handle safety block (14, 15) is installed, lift the lever (15) and rotate the handle (fig. 6-7).

A lock can also be installed on the handle to protect the system against tampering (fig. 8).

Seal can be adjusted using the extractable insert on the handle (fig. 3-4).

The seals can be adjusted later with the valve installed on the pipe by simply tightening the union nuts. This "micro adjustment", only possible with FIP valves thanks to the patented "Seat stop system", allows the seal to be recovered where PTFE ball seats are worn due to a high number of manoeuvres.

The Easytorque kit can also be used for micro adjustments (fig. 5).

- If volatile liquid such as Hydrogen Peroxide (H2O2) or Sodium Hypochlorite (NaClO) are used, for safety reasons we recommend you contact the service centre. These liquids, upon vaporising, could create hazardous over pressures in the area between the body and ball.
- Always avoid sudden closing operations and protect the valve from accidental operations.

Fig. 6

Fig. 7

Fig. 8

## ∨KD **DN 65÷100**

FIP has developed a VKD DUAL BLOCK® ball valve to introduce a high reference standard in thermoplastic valve design. VKD is a True Union ball valve that meets the most stringent needs required by industrial applications. This valve is also equipped with a customising

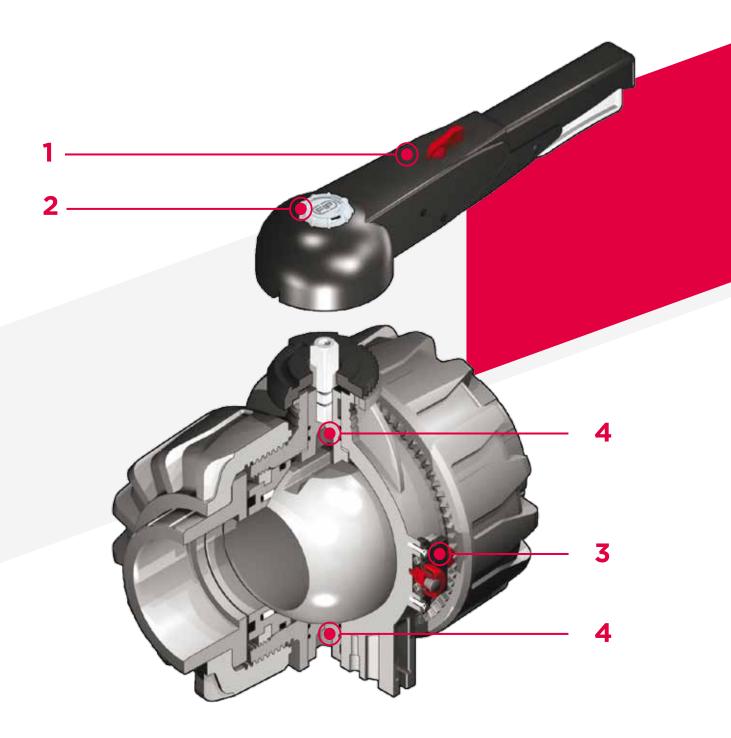

#### **DUAL BLOCK® 2-WAY BALL VALVE**

- Connection system for solvent weld, threaded and flanged joints
- Patented **SEAT STOP**\* ball seat carrier system that lets you micro-adjust ball seats and minimise the axial force effect.
- Easy radial disassembly allowing quick replacement of O-rings and ball seats without any need for tools
- PN16 True Union valve body made for rigid PVC-C injection moulding equipped with built-in bores for actuation. ISO 9393 compliant test requisites
- Option of disassembling downstream pipes with the valve in the closed position
- Full bore ball with high surface finish
- Carrier integrated in the body for valve anchoring
- Possibility of installing a manual reducer or pneumatic and/or electric actuators by applying an ISO standard drilling pattern PP-GR flange
- STAINLESS steel molded-in stem, with square section as per ISO 5211
- Valve material compatibility (PVC-C) and elastomer seal elements (EPDM or FPM), with water, drinking water and other food substances as per current regulations

Labelling System.

- 1 HIPVC ergonomic multifunctional handle for quick operation, block and graduated adjustment in 10 positions. Possibility of inhibiting rotation with a lock
- Customisable Labelling
  System: built-in LCE module
  in the hub made of a
  transparent protection plug
  and customisable tag holder
  using the LSE set (available as
  accessory). The customisation
  lets you identify the valve on
  the system according to specific
  needs i
- **3 DUAL BLOCK**\* patented lock system that ensures union nut tightening hold even in severe conditions such as vibrations or heat dilation
- 4 Double stem with double O-Rings for ball centring and operating torque reduction

### TECHNICAL DATA

### PRESSURE VARIATION ACCORDING TO TEMPERATURE

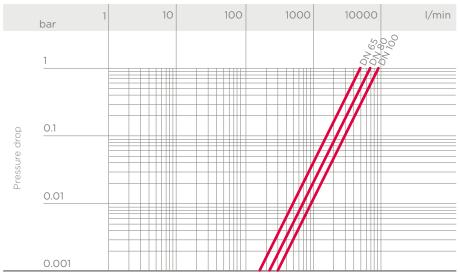

For water and non-hazardous fluids to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

Note: When using PVC-C at working temperatures higher than 90°, it is advisable to first contact the service centre.

Working temperature

## PRESSURE DROP GRAPH

Flow rate

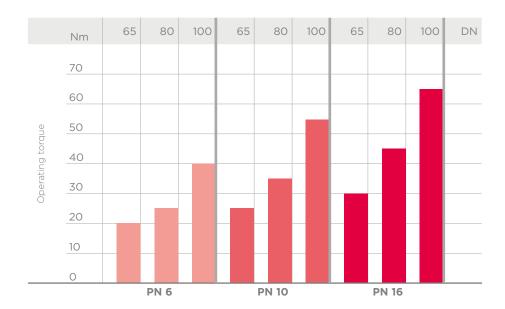

## K<sub>√</sub>100 FLOW COEFFICIENT

The  $K_v$ 100 flow coefficient is the Q flow rate of litres per minute of water at a temperature of 20°C that will generate  $\Delta p$ = 1 bar pressure drop at a certain valve position.

The  $K_v$ 100 values shown in the table are calculated with the valve completely open.

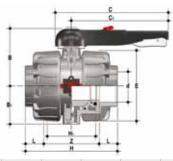

| DN                       | 65   | 80   | 100  |
|--------------------------|------|------|------|
| K <sub>v</sub> 100 l/min | 5250 | 7100 | 9500 |

### OPERATING TORQUE AT MAXIMUM WORKING PRESSURE

The information in this leaflet is provided in good faith. No liability will be accepted concerning technical data that is not directly covered by recognised international standards. FIP reserves the right to carry out any modification. Products must be installed and maintained by qualified personnel.

#### **ACTUATOR MOUNTING FLANGE**

The valve can be equipped with pneumatic or electric standard actuators and handwheel reduces for heavy-duty operations, using the PP-GR module reproducing the drilling pattern foreseen by ISO 5211 F07.

| d   | DN  | РхЈ     | Т  | Q  |

| 110 | 100 | F07 x 9 | 19 | 17 |

### FASTENING AND SUPPORTING

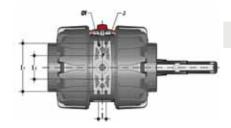

All valves, whether manual or driven, must be adequately supported in many applications.

The VKD valve series is therefore provided with an integrated bracket that permits direct anchoring of the valve body without the need of other components.

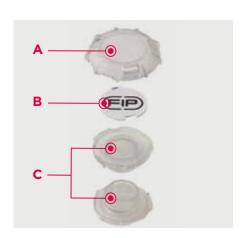

For wall installation, dedicated PMKD mounting plates which are available as accessories can be used. These plates should be fastened to the valve before wall installation.

PMKD plates also allow VKD valve alignment with FIP ZIKM pipe clips as well as allowing different sizes of valves to be aligned.

### CUSTOMISATION

The VKD DN 65÷100 valve is equipped with the customisable Labelling System.

This system lets you create special labels to insert in the handle. This makes it extremely easy to apply company logos, identification serial numbers or service indications such as, for example, the valve function in the system, the transported fluid, but also specific information for customer service, such as the customer name or installation date or location on the valves.

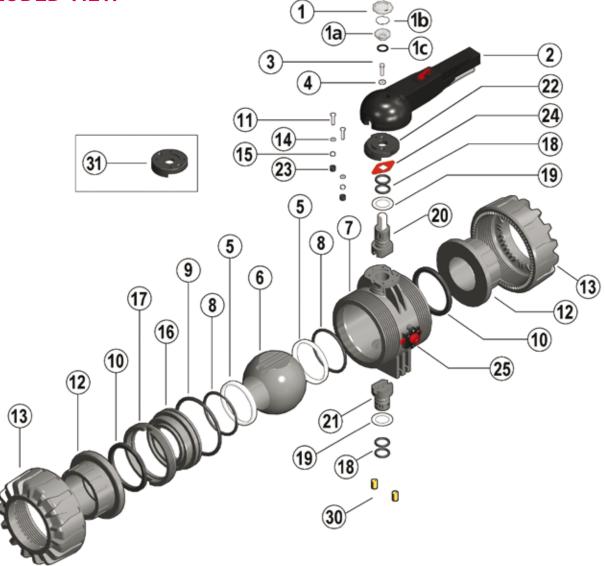

The specific LCE module is a standard supply and is made up of a rigid transparent water-resistant PVC plug (A-C) and white tag holder (B) made of the same material, bearing on the FIP logo one side.

The plate, inserted in the plug, can be removed and, once overturned, used for customisation by applying labels printed with the software supplied with the LSE set. Proceed as follows to apply the label on the valve:

- 1) Remove the upper part of the transparent plug (A) rotating it counter-clockwise as indicated by the "Open" label on the plug and remove it.
- 2) Extract the tag holder from its housing on the lower part of the plug (C)
- 3) Apply the adhesive label on the holder (B) to align the profiles matching the tab position.
- 4) Reinsert the tag holder in its housing at the bottom of the plug
- 5) Reposition the top of the plug in the housing rotating it clockwise; this way the label is protected against the elements.

### COMPONENTS

#### **EXPLODED VIEW**

- **1-1a** · Transparent protection plug (PVC 1)
- **1b** · Tag holder (PVC 1)
- 1c · O-Ring (NBR 1)
- 2 · Handle (HIPVC 1)

#### DISASSEMBLY

- 1) Isolate the valve from the line (release the pressure and empty the pipeline).
- 2) Release the union nuts by rotating the button (25) to the left, pointing the arrow on the open lock (fig. 1).
- 3) Unscrew the union nuts (13) and extract the body (7) (fig. 2).
- 4) Before disassembling, hold the valve in a vertical position and open it 45° to drain any liquid that might remain.
- 5) Open the valve.
- 6) Remove the protection plug on the handle (2) and unscrew the screw (3) with the washer (4).
- 7) Remove the handle (2).
- 8) Remove the screws (11) and plate (22) from the body (7).
- 9) Insert the two supplied wrench protrusions in the corresponding apertures on the threaded ring (17), extracting it by rotating counter-clockwise with the ball seat carrier (16) (fig. 3).
- 10) Press on the ball (6), being careful not to scratch it, and remove it from the body.
- 11) Press the upper stem (20) inwards and extract it from the body and remove the lower stem (21). Remove the anti-friction disks (19).
- 12) Remove the O-Rings (8, 9, 10, 18) and PTFE ball seats (5) extracting them from their grooves, as illustrated in the exploded view.

INSTALLATION

mechanical stress on the threaded joints.

#### **ASSEMBLY**

- 1) All the O-rings (8, 9, 10, 18) must be inserted in their grooves as shown in the exploded view.
- Place the anti-friction disks (19) on the stems (20-21) and insert the stems in their housings in the body.
- 3) Place the PTFE ball seats (5) in the housings in the body (7) and in the carrier (16).
- 4) Insert the ball (6) rotating it to the closed position.
- 5) Insert the carrier with threaded ring (17) into the body and tighten up in the clockwise direction using the supplied tool, to limit stop.
- 6) Position the plate (22) with rack on the body, and screw in the screws (11) washers (14) and nuts (15).
- 7) The handle (2) with protection plug (1, 1a, 1b, 1c) should be placed on the stem (20) (fig. 4).
- 8) Screw in the screw (3) with the washer (4) and position the protection plug (1, 1a, 1b, 1c).
- 9) Insert the valve between the end connectors (12) and tighten the union nuts (13), making sure that the socket seal O-rings (10) do not exit their seats.
- 10) Release the union nuts by rotating the button (25) to the right, pointing the arrow on the closed lock (fig. 1).

Note: during assembly, it is advisable to lubricate the rubber seals. Mineral oils are not recommended for this task as they react aggressively with EPDM rubber.

Fig. 2

Fig. 3

Fig. 4

built into the valve itself (see paragraph "fastening and supporting").

Before proceeding with installation. please follow these instructions carefully: 1) Check that the pipes to be connected to the valve are aligned in order to avoid

3) Unscrew the union nuts (13) and insert them on the pipe segments.

4) Solvent weld or screw the end connectors (12) onto the pipe ends.

7) If necessary, support the pipework with FIP pipe clips or by means of the carrier

2) Make sure the DUAL BLOCK® union nut lock system (25) is in the FREE position.

5) Position the valve body between the end connectors and fully tighten the union

6) Lock the union nuts rotating the button (25) clockwise (see paragraph "union nut

Adjust the ball seat carriers using the supplied tool (fig. 3).

nuts (13) clockwise with an appropriate wrench.

The seals can be adjusted later with the valve installed on the pipe by simply tightening the union nuts. This "micro adjustment", only possible with FIP valves thanks to the patented "Seat stop system", allows the seal to be recovered where PTFE ball seats are worn due to a high number of manoeuvres.

lock").

#### UNION NUT LOCK

Rotate the button to the left, pointing the arrow on the open lock to unlock DUAL BLOCK\*: the valve union nuts are free to rotate clockwise and counter-clockwise. Rotate the button to the right and point the arrow on the closed lock to lock DUAL BLOCK\*: the valve union nuts are blocked in the desired position.

#### HANDLE BLOCK

Thanks to the multifunctional handle and the red manoeuvre button on the lever, you can perform a 0°-90° operation and a graduated operation by means of the 10 intermediate positions and a stop lock: the handle can be locked in each of the 10 positions by simply pressing the Free-lock button. A lock can also be installed on the handle to protect the system against tampering.

The valve is two-way and can be installed in any position. It can also be installed at end line or tank.

### **WARNINGS**

- If volatile liquid such as Hydrogen Peroxide (H2O2) or Sodium Hypochlorite (NaClO) are used, for safety reasons we recommend you contact the service centre. These liquids, upon vaporising, could create hazardous over pressures in the area between the body and ball.
- Always avoid sudden closing operations and protect the valve from accidental operations.
